

Stow Bedon Road SAM 2 Analysis 7th January to 17th February 2024

The SAM2 data showed just under 22,000 vehicle movements over the recording period which is down 10,000 from the previous.

63% of vehicles were recorded at 30mph or below, hence 37% were over 30 mph. This is a deterioration from the last survey here.

About 13% of vehicles were over 35mph (versus 7% last time) with 19 vehicles recorded at over 50 mph and one at 65-70mph. Again a marked worsening versus the Autumn survey which recorded 10 out of 32,000.

The majority of vehicles travelling at over 35mph are in the evening “rush hour”
