

SAM2 report for 2nd November to 26th November 2024 Attleborough Road

49,088 vehicles were recorded with 54% at 30mph or less but with an average 13.4% over 35 mph.

There was very high traffic on the 18th and 19th when I believe Northacre was closed at The Street end. Weekends are, unsurprisingly, quieter than weekdays. There appears to be an inverse relationship between the % of speeders and traffic volume – higher traffic volumes have lower levels of speeding.

The highest percentage of speeders (>35mph) are in the small hours. The busiest times are 8am to 10am and 4pm to 6pm.
