Newbiggen Woodland

A new 120-hectare woodland is being planted at Newbiggen, between Scot's Gap and Cambo.

This will be a mixed woodland including native broadleaf and wet woodland to support biodiversity, areas of conifer for timber production, plus wood pasture and open ground.

A new path network will also be created based on community consultation to enhance existing rights of way and other commonly used routes across the site.

Artist's impression of the site

Prospective Timeline:

January: Installation of deer fencing around the planting locations

February-March: First phase of tree planting

Summer-Autumn: Creation of a network of paths to support access across the site

For more information:

Join us at drop-in sessions at our Scot's Gap office to find out more:

Tuesday 23 January 6-8pm

Monday 29 January 10-12
