Luss Estates North Long-Term Forest Plan Concept Map [C]

All forest compartments shown are within the Loch Lomond and the Trossachs National Park

Rowardennan Woodlands SSSI

Ben Lomond SSSI

West Loch Lomondisde Woodlands Site of Special Scientific Interest is designated as such due to the upland oak woodlands present. The Loch Lomond Woods Special Area of Conservation is also partly designated due to the woodland, which is currently in unfavourable condition.

Continued deer management within the SSSI/ SAC will aim to reduce the localised deer densities and reduce the browsing pressure on the native oak woodland. This will be done in tandem with exploration of other opportunities, such as improved and expanded deer fencing to improve regeneration and the ecological status of the woodland.

The A82 is an Agreed Timber Transport Route

Restocking design will improve favourable habitat for otters and further buffer their existing habitat from future forestry works. This will be done by increasing protection of riparian corridors with planting of native broadleaves.

Upper Douglas Water is classified by SEPA as being in good overall status

This is a severely restricted haul route and will require timely consultation with the council and Timber Transport Group prior to any operation

Most of the compartments are within the Loch Lomond National Scenic Area

Loch Lomond North is classified by SEPA as being of Good ecological status and potential

Lower Douglas Water is classified as being in Moderate overall status by SEPA

Loch Lomond South is classified by SEPA as being of Moderate ecological status and potential

Areas designated under the Ancient Woodland Inventory are frequent within these forest compartments, though there is none present within the commercially managed areas of Glen Douglas. They have not been displayed here to avoid an overly cluttered map but can be viewed at https://map.environment.gov.scot/sewebmap/
